1. Setup git repo
2. Add hard coded hours for each dining hall
Hillenbrand dining hall
Earhart dining hall
Wiley dining hall
Windsor dining hall
Ford dining hall
3. Write the program for seeing what dining hall is open.
compare what time it is to the times listed in the hours for the dining halls
4. Get data from Purdue's dining hall API
Use curl in order to get the data
5. Add error handling and create cleaner output
6. Finish the readme with clear explanation of how the script works
